 PROGRAM MANAGER FOR PROJECT IN ARTIFICIAL INTELLIGENCE

**Project management for Audio Mobility 2030**

**Advisor (s):** Nicholas Asher – asher@irit.fr

https://www....

**Net salary:** according to experience

**Duration:** 24 months

**DESCRIPTION**

This project manager position is proposed in the framework of the Audio Mobility 2030 (AM2030) project, which started in April 2023. AM2030 aims at enabling car manufacturers to have their own in-car audio application, regardless of the operating system. They will be able to deploy a global audio experience and offer the best content and proactive services to drivers. It is positioned as a true road companion that will help consumers adopt eco-responsible behaviors: vehicle self-diagnosis and maintenance reports, advice on driving and the use of on-board equipment.

Project partners: ETX Studio (Lead), Continental Automotive FRANCE SAS, Université de Toulouse - ANITI, École Polytechnique de Paris

ANITI’s role in the project is related to working on human-computer interactions, in particular on natural language understanding. The role of the project manager is to oversee the several components that ANITI is contributing to Audio Mobility 2030---the audio component, the dialogue model, the sentiment analysis model and the constraint analysis and recommendation model. The program manager will be responsible for making sure the components come together into a workable whole.

**MISSIONS**

Draw up the project's general technical specifications based on the functional specifications in coordination with the project coordinator and partners.

Work with the project team to define objectives and deadlines for deliverables (applications, modules, specific developments, etc.). Define requirements in terms of technical skills.

Select and allocate resources according to the project's technical constraints.

Evaluate the risks (costs, deadlines, etc.) that may arise during implementation.

Manage and measure progress (create dashboards, choose indicators, plan relevant meetings...).

Organize and lead relevant committees according to the project’s organisation.

Regularly transfer project progress reports to the project leader at UT and to the coordinator.

Prepare and ensure validation of deliverables.

**PROFILE AND REQUIRED SKILLS**

Applicants should ideally have a PhD in machine learning.
APPLICATION PROCEDURE

Formal applications should include detailed cv, a motivation letter and reference letters. Samples of published research by the candidate will be a plus.
> applications should be sent by email to: corinne.joffre@univ-toulouse.fr
